

## ENVIRONMENTAL AND ENERGY POLICY

### AGROLAB FEELS OBLIGATED TO PROTECT THE ENVIRONMENT

In addition to a fast, reliable, and credible analysis at the best possible price-performance ratio, we also offer

our customers our commitment for shared responsibility to mankind and the environment

### WE USE RESOURCES CONSCIOUSLY

To the extent possible, the environmental consequences, conservation of resources and energy savings are considered in the planning of facilities and construction projects,

as well as in the procurement of equipment and services. Acquisition of environmental data and in particular the monitoring and measurement of the energy-related

performance are the foundation for extensive economies where the use of resources is concerned.

### WE TAKE LEGAL AND REGULATORY REQUIREMENTS FOR GRANTED

In this regard it is a matter of course for us to comply with statutory and government agency regulations.

### ENVIRONMENTAL PROTECTION IS THE TASK OF ALL EMPLOYEES.

All employees are integrated in our management system and incorporate environmental thinking in their daily work. Every employee has the right and the obligation to work to ensure that circumstances that could cause unnecessary consumption of energy are eliminated. Through information we promote in-depth environmentally-conscious and energy-conscious

conduct on the part of our employees inside and outside of the firm. All managers are obligated to employ appropriate management practices in their sphere of responsibility, to constantly monitor the effectiveness of these practices and to adapt them to the latest findings and requirements.

### OUR ENVIRONMENTAL AND ENERGY MANAGEMENT SYSTEM IS CONTINUOUSLY IMPROVED AND DEVELOPED.

We make the means required to fulfil our environmental and energy objectives available at the locations.

Environmental protection in the company will be continuously improved and environmental pollution will be reduced within the framework of economic and financial possibilities. For us the continuous improvement of

our location- specific, energy-related performance is also a long-term prerequisite for effective cost reduction and an important contribution towards lowering of energy consumption.

Corporate management regularly reviews the appropriateness and effectiveness of the management system.
