

### Packaging instruction AL-West

Packaging, crates and stickers are available from the order list on our website or Transportation Service.  
Please note: Samples not packed according to this instruction cannot be accepted.

#### Soil samples

- || Deliver in clean soil jars placed in a clean soil crate.
- || Deliver in clean buckets.
- || Adapt packaging to the quantity of samples delivered (23 kg at most).

#### Dirty soil crate

#### Asbestos in a dirty bucket

#### Asbestos samples in buckets

- || Deliver in clean AL-West buckets marked with an Asbestos warning label.
- || Adapt packaging to the quantity of samples delivered (23 kg at most).
- || Two options for double wrapping:
  1. For AL-West buckets, seal the lid with sturdy tape. The handle must be able to move freely so that the buckets remain stackable.
  2. For other packaging, double wrap it in a dedicated asbestos bag (thickness 0.2 mm). Place the knot (Gooseneck style) on the side so that the buckets remain stackable.

Please note: barcodes must remain visible.

### Packaging instruction AL-West

Packaging, crates and stickers are available from the order list on our website or Transportation Service.  
Please note: Samples not packed according to this instruction cannot be accepted.

#### Water samples

- || Deliver in clean, securely sealed bottles. Preferably in special water crates (and a small cup for the smaller bottles).
- || In the event that bottles are delivered in a soil crate (e.g. for larger quantities); prevent the bottles from rolling back and forth to reduce the risk of shattering.

#### Bottles in crate, risk of shattering

#### Bottles firmly placed in crate, do not protrude above edge

#### Smaller packaging for asbestos samples

Smaller asbestos samples that are not delivered in a bucket should always be double wrapped, with the proper asbestos warning label on top. Special (double) bags are available for this purpose.

#### Special, urgent or highly contaminated samples.

In the event samples that require special attention (e.g. urgent, AP04, dioxin, asbestos or highly contaminated samples) are delivered, they must be marked with special labels.
